

# IHM MAINTENANCE MANAGED SERVICE

We take care of compliance – leaving you to get on with your job

SDSD's Hazmat team ensure that the correct IHM documentation including Supplier Document of Compliance (SDoC) and Material Declarations are uploaded to manage continuous conformity for your IHM inventory.

We identify, track and upload the required documentation for Purchase Order items containing Hazmat. We follow with suppliers to collect missing MD and SDoC where necessary.

Our easy to use dashboards provide comprehensive overviews of the IHM status across your fleet and downloadable IHM maintenance list reports.

#### How our service works:

- Our HazMat Specialists create an individual vessel database including historical procurement
- All previous IHM related data and existing Certificates are logged
- We use the 'Track Items' feature of our IHM software module to link items onboard to related POs that potentially contain Hazmat

- Our team attach the Material Declaration (MD) and Supplier's Declaration of Conformity (SDoC) to items marked as 'IHM related' 'Possible IHM' or confirming no evidence of IHM
- Consumption of Tracked Items follows the movement of the IHM related consumable items onboard, ensuring that replacements or renewals are logged accordingly
- Our user-friendly dashboard gives easy access to latest inventory of IHM Maintenance List from the vessel and office

Our HazMat team confirm receivables are compliant with ref. MEPC.269 (68), Appendix 3 Chapter 3.2

The service supports your renewal of proof of regulation compliance upon vessel sale or recycling

We also offer a Non-Managed Service for clients who prefer to update the IHM Maintenance software themselves.
